Problem statement

[Send feedback](#)

Given an array/list 'ARR' of integers and a position 'M'. You have to reverse the array after that position.

Example:

We have an array $ARR = \{1, 2, 3, 4, 5, 6\}$ and $M = 3$, considering 0 based indexing so the subarray $\{5, 6\}$ will be reversed and our output array will be $\{1, 2, 3, 4, 6, 5\}$.

Detailed explanation (Input/output format, Notes, Images) 

Constraints:

$$1 \leq T \leq 10$$

$$0 \leq M \leq N \leq 5 \cdot 10^4$$

$$-10^9 \leq ARR[i] \leq 10^9$$

Time Limit: 1 sec

```
import java.util.* ;
import java.io.*;
import java.util.ArrayList;

public class Solution
{
    public static void reverseArray(ArrayList<Integer> arr, int m)
    {
        ArrayList<Integer> list = new ArrayList<Integer>(); int n = arr.size();

        int start = m+1;

        int end = n-1;

        while(start<end){
            int temp = arr.get(start);
            arr.set(start,arr.get(end));
            arr.set(end,temp);
            start++; end--;
        }
    }
}
```
